About TVM Power Solar

TVM Power Solar System (P) Limited is an entrepreneurial driven fast emerging group with interests in sectors Green Energy. TVM Power has taken a bold Initiative to harness the divine solar energy on a large scale to meet the ever growing demand of the energy needs. As a sequel to its green initiative, TVM Power proposes to build a Solar Park in Rajasthan state to meet the demand of power in the state at least to some extent, thereby protecting the environment and minimizing the effects of Green House Gases.

TVM Power is aim to developing "TVM Solar Park" locating at each District in Rajasthan. It will be an Integrated Solar Park with a state of art infrastructure in over 100 acres accommodating 20 MW Solar power plants, solar components manufacturing and solar training and research institute. TVM Power vision is to Develop, Build and Operate Group Captive Solar Power Parks with a focus on SME to realize their dreams of developing Solar Power generation at an optimum cost and maximizing benefit.

DR. H. NAGANAGOUDA

Chief Adviser

Director, National Training Centre
for Solar Technology, KPCL, Bangalore

“India receives Solar Energy equivalent to 5000 trillion kWh/year which is many times more than the total energy consumption of the country. The daily average incident solar Energy varies from 4-7 kWh/m² depending upon the location & there are 250-300 sunny days in most part of the country, if harnessed efficiently, the country is capable of producing trillion-kilowatts of electricity. Solar energy is extremely beneficial as it is non-polluting and its generation can be decentralized. There is need to come together and take initiatives to create technologies for a greater use of these sources to combat climate change by reducing the emission of green house gases.

Rajasthan is bestowed with significant amount of solar energy potential and an overwhelming response from Developers/IPPs has already been received for establishing solar power projects. Rajasthan Government is fully committed to the promotion of solar energy. Conductive Government of India Policy will yield astonishing achievements in solar energy generation in next 10-12 years. Out of a total 1100 MW new project allocations, Rajasthan received the maximum share of 873 MW (i.e., 79.36% of all India allocations) through competitive bidding in the first phase of Jawaharlal Nehru National Solar Mission (JNNSM). Furthermore, 722 reputed companies have already registered their interest for setting up of solar power plants amounting to a total capacity of 16900 MW in Rajasthan. This preference is often attributed to geographical and climatic advantage of Rajasthan.

Our Aim

To become a global leader in the solar industry by providing solar energy solution that are cost competitive reliable innovative & sustainable to our customers worldwide.

Our Values

To get appreciation for our quality products for which we have given our entire efforts to manufacture with care. We are dedicated to deliver the high quality operational excellence and technological expertise.

Our Responsibility

To motivate the entire world to reduce the carbon emission with the help of renewable energy by means of solar power. We are constantly working towards empowering our world with the power of sun.
